Cloud & PC Based POS Solutions ! Which is best for your business ?

Cloud vs PC based POS and what you need to consider when deciding on a POS system.

When considering POS software options for your business, the best recommendation we have is don't have a pre-determined decision on either Cloud, PC, Apple or Android offerings. Instead, we recommend that you actually look at what each of the Software packages offer - which software has the features, functionality, usability, reliability and history and which will serve you and your business the best. For a more in depth look at POS Software and what each offer, please give us a call on 0800 72 73 74 and we can make a recommendation and explain more. Read on for more detail.

IdealPOS software is now available from Canterbury Eftpos & Retail

If you know about Hospitality software you may have heard that IdealPOS software is well - "it's just Ideal"

IdealPos is a software package that is very well thought out, packed with features and functionality for both Hospitality and Retail. The supporting manuals, knowledge base and training videos are extensive. That is why we have chosen and accepted to be Agents and Resellers for **IdealPOS**

Cash Register - Programming & Servicing

Canterbury Eftpos & Retail Solutions... for Point of Sale

How to use smarter Point of Sale Solutions to help you make better decisions, to Improve Cash Flow and make more money.

Whether growing an existing business or starting a new one, understanding how choosing the correct Point of Sale system can help make more money, how if you use it correctly it can help you free up cashflow and improve overall business performance and can make the difference between success and failure.

At Canterbury Eftpos & Retail Technology we don't just sell you a Touch Screen POS system and let you loose. When talking to us at the start we go through a consultation process to get an understanding of your business, how big you want it to grow and what your wish list in a system. We use our vast experience and recommend what we think is the best matched system to your business. Once you have a chosen POS system, then the next steps are:-

Supply - Program - Install - Train - Support

Once the POS Software is decided, the next move is **Supplying** the POS Hardware. The rule for Point of Sale is - choose software first, then hardware, the reasons being that not all hardware works with all software, so it's best to get your whole solution from the one supplier.

The next step is **Programing** all of your business requirements and settings into the software. This is where having an experienced POS company, that has helped many businesses get set up, will be of benefit to you. (Canterbury Eftpos & Retail is in it's 21st year).

Installation at your site, setting your system up, ensuring the right power surge protection, explaining the system to you and checking all is ready to start trading.

The next step is **Training** - this is a critical stage, understanding HOW to use your chosen POS system. Steps in training cover the daily use of POS and end of day procedures, next steps are the back office with daily, weekly & monthly processes and procedures so you can learn to **Optimise & Maximise** your Businesses performance.

SUPPORT is, we think, one of the most critical things. Once you have a POS System you are going to rely on it, so knowing that the company you choose to supply your system will support you, and offer service in a hurry when you need it is extremely important. If your POS system is "Mission Critical" for your business to operate, you need to know you will be supported.

Short Term Rentals

Eftpos Mobile or Landline & Cash Registers & Cash Reg

EFTPOS News

5.2 Upgrade Deadline LAST DAYS

The deadline for 5.2 terminals is 31 May 2014

Replace your 5.2 Terminal now with the INGENICO range - we believe it to be the best Terminal on the market at present.

"Tap N Go" Contactless

The latest range of Eftpos Terminals with "Tap N Go" enabled are being adopted by many, especially in fast serve type situations. Speed up your queue. Conditions do apply to Tap N GO transactions -ask us for the details.

EFTPOS @ Table for Hospitality Sites in GPRS or Blue Tooth

Bringing Eftpos to the table has just got that much easier with the latest release of Bluetooth and MobileEftpos terminals that have Contactless turned on. Some POS solutions enable connectivity making an Interfaced transaction with POS.

Just Released Creon & Verifone Terminals

The latest EFTPOS Terminals from Verifone & Creon (with Epay, Ezipay and Activate Phone Top Ups software) can now be deployed on Paymark Network. **Ask us which model Eftpos Terminal is best for your Business**

Paymark Dial Up Fee

If you want to get your Terminal on Broadband - Faster transactions and save paying the new \$5 p/m Fee

Testimonials and Success Stories

Success Story - Espresso Car Wash Café - Ferrymead

Owners of the Espresso Car Wash Cafe Ferrymead - **Paul & Brooke** came looking for a replacement for an older POS system that they have had for over 3 years. Having dealt recently with Canterbury Eftpos & Retail for another new system a few years ago at their Espresso Car Wash Cafe Palms outlet, it was logical to get the same solution

POS Offers the benefits of:

- Staff shifting between branches then know the system and less training is required

- Management Team only need to learn the one system

- Eftpos can connect to POS

Canterbury Eftpos & Retail are proud to offer full back up and support for Point of Sale, Eftpos and Cash Register systems.
